

GitHub

git config --global user.email displays email it is set up with

git clone <url> gets thingy on your system where command is run

git status

git commit -m "message #hashtags" commits

git push syncs stuff up online

git add . adds all files

git pull gets changes from repo and merges changes

if conflicts: git pull (will fix some clashes), else:

git pull with conflicts:

everything above <<<<<<< HEAD is ok

everything between <<<<<<< HEAD and ===== is what was there before

everything after this is what was put there after

but ask for help
